

Build and maintain reports the easy way

Our Reports ForNAV Designer is an easy-to-use tool for creating and modifying reports for Microsoft Dynamics NAV. If you are familiar with the C/SIDE reporting tool, you can start working with the Reports ForNAV Designer instantly.

And becoming a ForNAV partner is just as easy. There is no partner fee and everything you can find on our website is free. This includes online training, documentation, support, and marketing material. You get full access to the product for development and your own internal use.

Challenges

- ✓ Even small modifications to documents, such as invoices or order confirmations, can be very expensive for customers.
- ✓ Many customers would like to make (minor) modifications themselves.
- ✓ Building or maintaining NAV reports in RDLC can be difficult to estimate
- ✓ RDLC reports are often complicated and expensive to maintain.
- ✓ Upgrade projects are often delayed due to tough reporting discussions.
- ✓ Basic ERP constructs, such as headers or footers, transport of subtotals, and group totals, requires complicated code.
- ✓ Limited resources are available for Report Builder and Visual Studio.

Solution

- ✓ The Reports ForNAV Designer provides an enhanced user experience, with a helpful visual environment and easy drag-and-drop functionality.
- ✓ Easily create new reports, including templates and tools to enhance productivity.
- ✓ Convert and edit RDLC reports.
- ✓ Preview with or without a request page, and with live data.
- ✓ Save designs in custom layouts or report objects.
- ✓ Customers can choose a perpetual or a subscription model – independent of their Dynamics NAV license – both with an unlimited number of reports.

Results

- ✓ Partners tell us that report development is done in less than half the time it takes with RDLC.
- ✓ Report development is moved from a specialist job to one for a majority of consultants.
- ✓ Increased job satisfaction among developers and consultants, as reporting is easy again.
- ✓ As reports are executed on the server (service tier), performance is increased.
- ✓ Full support for all client types supported by Microsoft Dynamic NAV.
- ✓ Improved agility for modifying reports.

Reference

“We chose ForNAV over other available systems partly because the founders behind ForNAV have a really good reputation – they are very well known in the NAV community – and partly due to the fact that, by the time we signed up, a large number of other companies, similar to us, had been using the product. That gave us a lot of confidence.”

Stuart Murphy, Business Manager
Jendev (part of Jersey Electricity plc.)

Ideal customer

- ✓ A Microsoft Dynamics NAV customer who wants to modify existing reports or build new reports through their partner, equal to 12 or more hours of work.
- ✓ A Microsoft Dynamics NAV customer who wants to modify existing reports or build new reports in-house.
- ✓ A Microsoft Dynamics NAV customer or their partner, who is not familiar with or fond of Report Builder and/or Visual Studio.
- ✓ A customer with several reports with more or less the same layout.

Compelling reason

- ✓ Walk through your Dynamics NAV offers, and get back to customers with a significantly improved offering – and do it before your competitor.
- ✓ Get back to customers who have previously turned down your offer for Dynamics NAV because the reporting was too complex and/or too expensive.
- ✓ Look for customers who have expressed an interest in doing reports themselves.
- ✓ Stay more competitive by offering this as a default to all new Dynamics NAV customers.

When to walk away

- ✓ If the customer has a strategy to use only RDLC, Report Builder, and/or Visual Studio for reporting. This could, for instance, be the case for larger groups with a Microsoft-only SQL/RDL reporting strategy.
- ✓ If the customer has a strong need for reporting across several Microsoft SQL databases or other database sources outside of Microsoft Dynamics NAV.
- ✓ If the customer's entire reporting needs can be solved using only PowerBI, Excel, or similar tools.
