Partners

Cost control

Easy to setup new
connections and
connect new
parties

Uniquely
Turnkey-Ready

Cloud service on
Azure

Truly
End-To-End

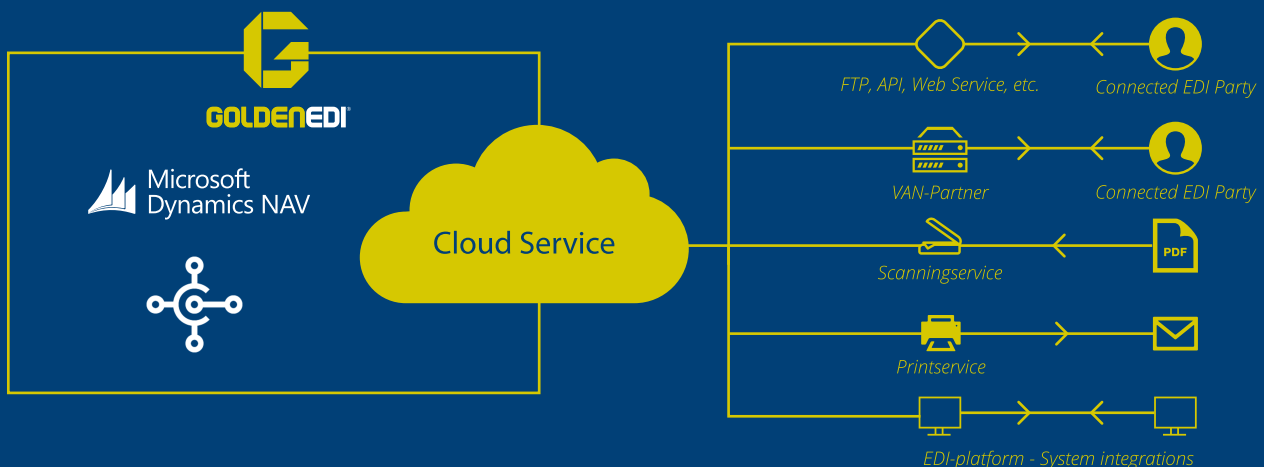

Golden EDI truly supports End-To-End, combining necessary components needed to manage the entire flow:

An integrated module in NAV that provides process efficiency, event handling, data checks and is configurable without coding.

A Cloud Service deployed in Azure that orchestrates all flow and logic with format management and translators between parties.

And finally, a surface to the domain with a variety of connectivity alternatives, and prepacked format and services.

UNIQUELY TURNKEY-READY, MEANS

- ✓ Not just an EDI platform that requires extensive project efforts and cost spent, but also a solution that is designed to really handle the End-To-End requirement, with all components needed and Future Proof designed with Extension 2.0 and Microsoft AppSource concept, which means high degree of No-Touch and Ready-To-Go feasibilities.
- ✓ Customers can respond directly on market demands regarding exchange of business information, with a high degree of flexibility compared to alternative solutions.
- ✓ Dynamic configuration and mapping with preselected configurations and high degree of reusable business format eliminates demanding programming efforts and allows easy connection of new parties.
- ✓ Golden EDI offers all needed components in one contract for the entire service with full cost control and comfortability.

WHAT PARTNERS GAIN TO INCLUDE GOLDEN EDI IN THEIR VALUE PROPOSITION

- ✓ Golden EDI complements and strengthens partner's value proposition with a powerful and scalable solution in an area where the need is continuously increasing.
- ✓ Golden EDI is key-ready, which allows the partner to focus more on the business dialogue and improvements and less on the technology challenges and complexity.
- ✓ Golden EDI gives the partner a margin strengthening and the partner can also build its own delivery capacity and further create revenue opportunities.
- ✓ Built according to Microsoft's principles of architecture and guidelines for packaging and pricing, which means a secure and future proof solution.
